

COMPANY PROFILE

Data infrastructure. Integrated for performance.

We bring server rooms, cooling and critical power into one coordinated project, from site assessment to tested handover.

LAGOS, NIGERIA

Projects across Nigeria

Built around your infrastructure needs

AFRICORE DATA SYSTEMS LTD is a data infrastructure integrator operating from Lagos. We coordinate the physical systems that support enterprise IT, with qualified engineers and specialist partners named for each project.

Our vision

To become Africa's leading infrastructure integration company for mission critical data environments.

Our mission

To design, build and integrate dependable data infrastructure through coordinated engineering, clear responsibilities and documented testing.

ONE COORDINATED SCOPE

**Room. Cooling. Power.
Cabling. Handover.**

RC 9030073 Incorporated 27 November 2025 Private company limited by shares

Five connected service lines

01	Server room design and build	Readiness review, room layout, load and growth plan, coordinated design, bill of quantities and phased upgrades.
02	Data centre cooling	Load and temperature survey, airflow review, containment options and precision cooling integration sized for the site.
03	Critical power	UPS and battery integration, runtime review, rack power distribution and generator changeover interfaces.
04	Racks, cabling and monitoring	Rack planning, copper and fibre links, labelling, test records and environmental alerts to your nominated team.
05	Commissioning and continuity	Agreed acceptance tests, handover documentation, restore review and a scoped planned maintenance programme.

Every proposal defines deliverables, responsible specialists, exclusions and acceptance checks.

From a clear brief to a tested handover

01

Assess

Record the site, critical load, operational risks and the constraints that matter.

02

Design and cost

Agree a coordinated scope, engineering responsibilities, specification and bill of quantities.

03

Source

Select equipment and specialist suppliers against the approved scope and procurement route.

04

Install

Coordinate works, access and changeover windows with IT and facilities teams.

05

Test

Witness and record the acceptance tests agreed before installation.

06

Handover

Provide as built records, test evidence, asset information and maintenance responsibilities.

Live environments are scoped around agreed change windows and a written rollback plan.

Start with a defined problem

UNDERSTAND THE RISK

Infrastructure Readiness Assessment

A scoped review of the room, cooling, protected power, racks, cabling and monitoring. Receive prioritised findings and the next engineering actions.

IMPROVE AN EXISTING ROOM

Defined upgrade package

Resolve a cooling, UPS, rack, cabling or monitoring need through a written design, coordinated installation and documented acceptance checks.

PLAN A NEW ENVIRONMENT

Design and delivery scope

Build a coordinated brief, engineering design and bill of quantities before committing to installation. Add a scoped maintenance programme at handover.

Fees follow the site, scope, specialist input and logistics. Request a written quotation.

Experience behind the founder

Ekulide Miracle Chukwuemeka

Founder & Group Chairman

The founder's delivery background includes workplace and specialist environment projects through Outtabox. This experience supports project coordination and client delivery at Africore.

Roche Abuja workplace

Planning, design coordination and interior delivery.

Miva Robotics & Innovation Lab

Workbenches, task lighting and specialist fit out.

News Central Abuja workplace

Broadcast and corporate workplace delivery.

All three projects and photographs are credited to Outtabox. They are founder background, not Africore project credentials.

Clear responsibility at every interface

Excellence

We agree the specification and acceptance checks, then verify the work against them.

Integrity

We give site based advice and make claims we can substantiate.

Accountability

We name the owner of each task, record changes and keep clients informed.

Collaboration

We coordinate the client's IT, facilities and procurement teams with the specialists required for the project.

Stewardship

We protect people, assets and information while considering energy use and lifecycle cost.

A specialist delivery model

Africore leads coordination and verification. Competent engineers, OEMs and authorised partners carry out and sign off their defined disciplines.

The delivery team and responsibilities are named in each quotation.

LET'S DEFINE THE RIGHT NEXT STEP

Tell us what your infrastructure must support.

New room. Existing risk. Planned upgrade.
